

# BY-PASS METER BAR

Simple, safe, and reliable residential meter changes without interruptions in service.

## SHUTTING OFF SERVICE IS A THING OF THE PAST.

The Mueller® By-Pass Meter Bar allows you to easily replace an old meter while continuing gas flow to a residence or business. The innovative design bridges the gap between service piping and in-house piping to provide a stable support structure for gas meters while redirecting the gas flow through a by-pass mechanism using a single actuation operation from the center of the meter bar.

This design allows for simple operating procedures — saving cost, time, and other valuable resources. The By-Pass Meter Bar is designed for use on natural gas services delivering up to 5 psi (34 kPa) delivery pressure.

### By-Pass Bar

No interruption in service or loss of pilot lights. Eliminates the need for a complicated by-pass kit.

### Single Actuation Operation

Simplifies utility worker training and prevents potential operational errors.

### Maintenance Free Design

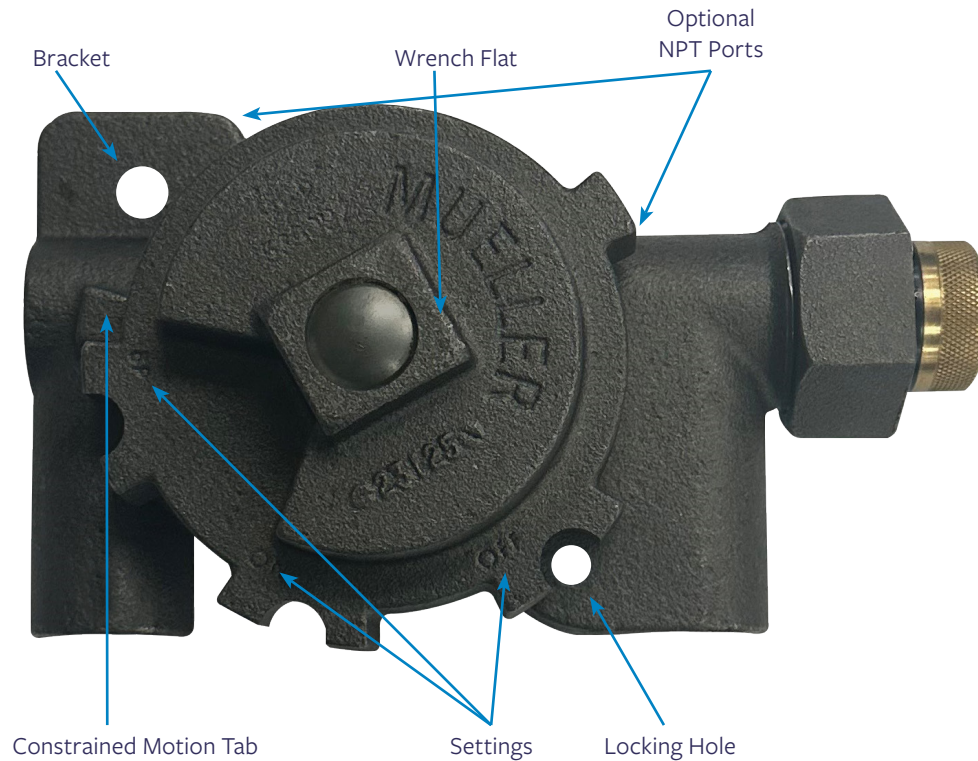

Eliminates utility scheduling, re-lights, or extra associated costs.

### Tamperproof Design

No need for temporary external regulators or by-pass hoses. Secured with standard barrel locks.

# BY-PASS METER BAR – INNOVATIVE DESIGN

- **Brackets** – Match up with existing mounting kits to secure the meter bar to a residence
- **Wrench Flat** – 1.5" wide
- **NPT Ports** – Two bosses on the inlet and outlet of the meter bar that have the option to be tapped with 1/4" NPT thread. Allows for confirmation that there is no substantial pressure drop downstream that would interrupt service to the customer.
- **Constrained Motion Tab** – Eliminates ability for 360° rotation to avoid possible user error
- **Settings** – ON, OFF, and BP (By-Pass) settings labeled on the meter bar. BP setting allows the user to by-pass the meter without interrupting flow to the customer.
- **Locking Hole** – Compatible with a standard barrel lock and prevents tampering with the meter bar
