

Mueller Introduces Enhanced Line Stopper Fitting Design

The enhanced design of Mueller's Line Stopper Fittings features machined surfaces on all contact points between the pipe and the fitting, lateral weld seams and interior stopper landing surfaces. Machined surfaces provide consistent weld land widths, consistent bevel angles and accurate positioning of stoppers for better first time sealing.

These fittings are now available in the 4" size, with additional sizes to be upgraded sequentially until all sizes feature these new enhancements.

In addition to these improvements, each Mueller fitting will now be indelibly marked with part number, size, maximum pressure and temperature rating information for easy field identification.

Contact your local Mueller Sales Representative for more information regarding this product advisory from the Mueller Gas Products Division.
