Valve Changer Tailpiece Kit

When using the NO BLO® Valve Changer with an insulated union tailpiece, the Plugging Unit passes through a restricted area of the union which might interfere with its operation. To avoid this situation, a special full bore ID tailpiece kit is available. Three sizes are included for use on ³/₄", 1" and 1¹/₄" insulated meter valves. The special tail piece is intended to be used temporarily in place of the regular insulated tailpiece, and used to attach the Valve Changer and Plugging Unit to the valve.

Using a tail piece from this kit will help to assure a smooth transition of the Plugging Unit's rubber plug as it is moved through the special tail piece and upstream of the valve body.

The kit is available as Part No. 682993. In addition, the kit has been added as a standard item included with H-17010 Valve Changer Plugging Units.
